Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This report presents selected results from the National Education Longitudinal Study of 1988 (NELS:88/2000). Most of the participants in this study were eighth graders in 1988, graduates from high school in 1992, and at the time of the postsecondary transcript data collection in the year 2000 were around the age of 26 or 27. Of all likely postsecondary participants, 45 earned a bachelor's degree or higher by age 26 or 27. Of those who earned more than 10 college credits, 51 earned a bachelor's degree or higher by age 26 or 27. Sixty-seven percent of those who earned more than 10 college credits and attended a four-year college at any time received a bachelor's degree or higher by age 26 or 37. Of all undergraduates who earned more than 10 credits, 20 attended institutions in more than one state as undergraduates. More than half of Hispanic/Latino students began their postsecondary careers in community colleges, in contrast to 37 of White students and 41 of Black students. Most undergraduates attended school in summer terms. The higher the mathematics attainment in high school, the more likely the student was to complete a bachelor's degree. Data also show that students who attended more selective colleges had higher grade point averages. Other data are provided about student characteristics. Two appendixes contain summary tables and technical notes. (Contains 29 tables and 7 references.).
