If this line represents a plane perpendicular to V, draw the development of the cone with the line of intersection of the cone and plane traced on the development. 98. A right circular cylinder, standing in a vertical position, as in Fig. 49, diameter 7 units, and length 10 units, is pierced from side to side by a square hole 3 units on each edge, the axis of the hole and the axis of the cylinder bisecting each other at right angles. Draw the development of the surface. 99. A sheet of metal 22 units square with a hole 11 units square cut out of its middle, the sides of the hole being parallel to the edges of the sheet, is rolled up into a cylinder. Draw the plan, front and side elevations of the cylinder. CHAPTER X. STRAIGHT LINES OF UNLIMITED LENGTH AND THEIR TRACES. 86. Negative Coordinates.--We have dealt only with points having positive or zero coordinates, and the lines and planes have been limited in their extent, or, if infinite, have extended indefinitely only in the positive directions. As it becomes necessary at times to trace lines and planes in their course, no matter if they cross the reference planes into new regions of space, the use and meaning of negative coordinates must be explained. The value of the x coordinate of a point is the length of the S projector or perpendicular distance from...
