Diplom.De Sep 1999, 1999. Taschenbuch. Book Condition: Neu. 210x148x3 mm. This item is printed on demand - Print on Demand Titel. Neuware - Scientific Study from the year 1999 in the subject Business economics - Business Management, Corporate Governance, grade: 1,0, Reutlingen University (Unbekannt), language: English, abstract: Inhaltsangabe:Abstract: The following report explores the main aspects of knowledge management. The history of knowledge management reveals that different trends and developments influenced the evolution of a new management theory. Advanced information technologies that enable global knowledge-sharing and the recognition that people are the most valuable resource in a fast changing environment are the main reasons why knowledge management has become increasingly important. An attempt to clarify the terminology demonstrates that there is no generally accepted definition of knowledge management. This report defines knowledge management according to the three dimensions content, culture and infrastructure and thus, provides a basic framework to the main knowledge processes. The differentiation between the codification approach and the personalisation approach is essential in the evaluation of the implementation process. The first approach mainly relies on computer systems and databases whereas the latter focuses on person-to-person contacts. Both strategies can be combined to a certain extent, however, the main focus should only be on one of the two strategies. The most common pitfalls for ineffective knowledge-sharing are cultural barriers and the fact that many organisations overestimate the role of technology. Thus, success factors include fostering a knowledge-sharing culture and embedding the use of technology in everyday practice.
